

RICKY DAVE MADRID

General Trias, Cavite, Philippines | +639696103982 | madridrickydave@gmail.com | kyricdev.github.io

Self-motivated, disciplined, and passionate developer who is always open to challenging projects. Experienced in frontend and backend with experience in AI powered solutions and AI native workflows.

EXPERIENCE

2025 - 2026

Full Stack Software Engineer | Pioneer Dev AI.

Provide AI-powered solutions to clients and business problems. Worked on the frontend and backend of various applications providing authentication/invitation logic using BetterAuth, payment integration with Stripe, application monitoring with Sentry, REST APIs with security and user access restrictions for various resources and converting Figma UI/UX to code.

2022 - 2025

Junior Software Developer | Hive Group, Inc.

Create responsive web and mobile based applications. Worked primarily in integrating backend APIs for website functionality. Worked in integrating various accounting software such as QBO, XERO, and MYOB into applications.

2019 - 2021

Facilities, Maintenance, and Systems Engineer | Hayakawa Component Technologies, Inc.

Developed an internal company IOT project that tracks assembly line output and controls assembly line electronics automatically and through a browser. Made using ESP32 microcontroller and Arduino framework.

PROJECTS

Adjudica AI (AI-Powered Worker's Compensation Support for Law Firms)

Remix, ReactJS, Postgres, Prisma, NodeJS, Sentry, BetterAuth

Tool that allows lawyers to upload files and leverage AI to analyze and summarize case data and information. Provides event timeline of the case, form generation of commonly used forms with templates, and AI chat bot. Worked on providing monitoring using Sentry and creating the invitation system frontend and backend along with authentication and the user management settings logic and pages and various REST API endpoints for resources such as documents, images, user profiles, etc.

AiAuditBuddy (AI-Powered Auditing Application)

Remix, ReactJS, Stripe, Postgres, Prisma, NodeJS

Platform that uses AI to provide audit feedback and informing them which standards and requirements are met, and which are lacking and what to provide. Created the payment integration using Stripe and worked on the frontend and the backend for the user invitation system, file upload, and analysis and the user management backend and pages and various REST API endpoints for resources such as documents,

images, user profiles, etc.

Moolamore (Cashflow Scenario Generation App)

Flutter, ReactJS

Allows users to generate scenarios showing their cashflow projections for a span of time. Shows data in both tabulated and graphical form. Able to combine and compare with other scenarios. Has integration with Quickbooks, Xero, and MYOB allowing users to import data from them.

BOS-EMS (Employee Management Software)

Flutter

Employee management system. Allows users to add and update employee data, form/assign schedules, set holidays, create leave applications, log timesheets, and automate payroll generation and calculations. Worked on the UI for the application

Chrysalis (IOT System)

C++ (Arduino), HTML, CSS

Allows users to control lighting systems and track production output through the browser using a microcontroller as the server.

EDUCATION

Bachelor of Science in Electrical Engineering | De La Salle University – Dasmariñas

COMPUTER LANGUAGE

- Remix
- ReactJS
- Flutter
- NodeJS
- JavaScript
- C#
- .NET Core
- PostgreSQL
- C++
- Arduino
- Python
- NextJS
- MongoDB
